

AUDAC TOUCH™

Simplified Design, Management & System Control Platform

Highlights:

- Design, management & control for integrators
- Smart widgets
- No programming skills needed
- Live audio control & processing
- Over-the-air updates
- LUA scripting
- Touch™ emulator
- User-friendly control dashboards for end users
- Full system overview
- Effortless control of your setup
- Non-AUDAC product control

Product information:

With this single OS platform, we offer the most intuitive way of designing and managing your installation. Easily configure audio processing and integrate third-party tools. Create custom user dashboards without coding, enabling system control from any device. For more complex solutions, use LUA for tailor-made control scripts. This offers a unified platform for quick integrations and immersive user experiences.

Effortless control over the most advanced acoustic configurations. This technology comprises two key components: WavePreset™, designed to deliver optimal performance in a fully absorbing environment like outdoor settings, by applying factory settings to your loudspeaker. Additionally, WaveTune™ allows you to fine-tune the EQ on top of a preset, ensuring seamless integration with the specific acoustics of your application.

Unified third-party control via TCP/IP, UDP, ASCII, and HEX commands. Create custom widgets for AUDAC equipment and integrate them into your dashboard. Additionally, take advantage of our partnership with Sennheiser, providing ready-made commands for their products.

Experience the convenience of crafting your own customized dashboards in just minutes with AUDAC Touch. Our intuitive interface allows for quick and seamless control personalization, ensuring you have the perfect setup for your next installation.

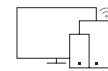

We're excited to offer you a variety of premium features that will enhance your experience and take your AUDAC Touch™ usage to the next level. While our free version provides a fantastic foundation, upgrading to premium gives you access to advanced features that will help you get the most out of our platform.

Properties:

Total system control

Automatic device discovery

Custom dashboards

Premium functionalities on demand

Freely downloadable

Supported OS:

Optional Licenses:

- SL-PLUS1 - License AUDAC Touch™ Plus
- SL-PAGE1 - License AUDAC Touch™ Page

Applications:

- Bars & Restaurants
- Corporate
- Education
- Hotels
- Retails
- Residential
- Clubs

Architects' and Engineers' Specifications:

A total system control platform shall be freely available and compatible with a wide variety of operating systems, including Android, iOS, Windows, and Mac. This platform shall have installation and standalone options on Windows. This platform shall allow simplified design and management of deployments with functional and informative widgets and dashboards for AUDAC devices in combination with third-party audio and video equipment control possibilities. The platform shall have compatibility with a wide range of AUDAC products: amplifiers, matrixes, audio sources, active speakers, and even more. The platform shall have WaveDynamics™ integration to control the most advanced acoustic configurations. Third-party control shall be done via TCP/IP, UDP, ASCII, and HEX commands. It shall have an automatic device discovery feature that automatically recognizes and names all AUDAC devices in the system in the same IP range. The platform shall provide automated over-the-air updates for seamless system maintenance for the discovered and saved devices that have the OTA feature. It shall allow quick access to features such as I/O volume, mapping, mixing, source selection, and others. The platform shall allow the creation of custom dashboards for the needed applications without the need for custom programming. One shall select, scale, and place widgets to create custom dashboards. The platform shall be cloud-based. User accounts, dashboards, and images used on dashboards shall be securely stored in the cloud to eliminate the risk of any lost projects. The platform shall offer premium licenses to enhance the user experience in addition to the fantastic foundations of the free version. The premium licenses shall be account-bound and only paid once to activate. AUDAC Touch shall be the single full-solution platform for both fast and easy deployments for integrators and provide immersive and intuitive control experiences for end users.
