The unique work station is an indispensable aid when cleaning, maintaining or repairing your trumpet. The horn of the instrument is placed on the peg and fixed on the opposite side by a cone in the mouth piece tube. This system allows the instrument to be turned 360° and stopped in the precise position you require, allowing easy access to the whole instrument. The 4 foldable legs ensure the stand is stable and firm. The work station can be attached to a worktop with the table clamp included in the delivery.
